SANDBOX Guide

The **sandbox** environment is set up as a separate space from the production environment, and its main purpose is to provide a fully available environment. This space allows stores to test extensively until the desired results are achieved, thus ensuring that they are properly prepared before moving to the production stage.

The **sandbox** environment replicates all the functions present in the production environment, maintaining identical integration. The only aspects that require adjustments during a migration are:

- Credentials
- Security APIs and connections
- Import of JavaScript libraries

These elements are considered to ensure a smooth and successful transition to the production environment.

The image shows a payment form interface within a sandbox environment. At the top right, there is a close button (X) and the text "Número de pedido 1700487389". Below this, there are two main payment options: "Tarjeta" (Card) with a checkmark icon, and "QR" with a QR code icon. A reminder text "Recuerda activar tus compras por internet" is displayed below these options. The form includes several input fields: "Número de tarjeta" (Card number) with a Visa logo, "Caducidad" (Expiration date), "CVV", "Nombres" (First name) with the value "Oscar", "Apellidos" (Last name) with the value "Alanya", and "Correo" (Email) with the value "alanyaoscar7@gmail.com". At the bottom, there is a large green button labeled "Pagar S/70.00" and a small text "POWERED BY izipay" below it.
